ECDAT

Cryptographic Discovery & Quantum Risk Analysis

Target: rsa_small.py

Scan type: Standard scan

Scan date: 10 September 2026

Scan ID: scan-minimal-001

0
CRYPTOGRAPHIC ASSETS

0
OPERATIONS

1
FINDINGS

1
HIGH RISK

ECDAT v1.0

1. Executive Summary

ECDAT analyzed 1 files in rsa_small.py and detected 1 finding. The main risks are RSA-1024. These issues are concentrated in (root) and should be prioritized for migration.

Overall risk

NONE Risk score: **0.0 / 10**

Counts

- 0 cryptographic assets
- 0 cryptographic operations
- 1 security findings (1 high-risk, 0 medium-risk)

Severity breakdown

[HIGH]: 1

Top risk contributors

No risk-scored operations.

2. Cryptographic Inventory

What cryptography exists in this system? Every detected algorithm is listed - the table is never truncated.
No confirmed cryptographic use detected.

Operations summary (grouped)

No confirmed operations recorded.

3. Migration Recommendations

One point per affected rule - e.g. 14 RSA findings produce a single migration point. Ordered by severity.
No migration actions required.

4. Findings Summary

One row per finding group (rule x severity) - covers every finding without growing per occurrence. Per-occurrence detail is in the HTML/CSV/JSON exports.

Severity	Rule	Title	Occ.	Files	Top location
[HIGH]	RSA-1024	Weak RSA key size (1024-bit)	1	1	rsa_small.py:12

5. Scan Coverage

Coverage: 1 / 1 files (profile: standard; cache: miss; elapsed: ?s)
Skipped: 0 file(s) before analysis; 0 file(s) analyzed with no cryptographic evidence.

Methodology notes

- Detectors: ecdat 0.1.0
- Risk source: no-risk-record; registry: ; scan: scan-minimal-001
