ECDAT Cryptographic Risk Report

Project: rsa_small.py | Status: COMPLETE
Risk NONE (0.0/10) | Findings 1 | Operations 0 | Assets 0 | Files 1 / 1
ECDAT analyzed 1 files in rsa_small.py and detected 1 finding. The main risks are RSA-1024. These issues are concentrated in (root) and should be prioritized for migration.
Confirmed findings: 0 | Declared capabilities (unconfirmed): 1

2. Priority findings

No confirmed findings.
Severity distribution (measured risk class per finding): high=1.

3. Cryptographic inventory (confirmed use)

No confirmed cryptographic use.

4. Affected locations

| [HIGH] (root) -- 1 finding(s) in 1 file(s): RSA-1024

5. Migration priorities

No migration actions.

6. Scan coverage

Coverage: 1 / 1 files with cryptographic evidence (profile: standard).
0 file(s) skipped before analysis; 0 file(s) analyzed with no cryptographic evidence.

7. Methodology and technical details

P1 quantum/classical risk engine: Mosca-style score per operation (0.35*Q + 0.20*E + 0.15*B + 0.15* + 0.15*mosca_boost, clamped 0..1, wire scale 0..10); classes Critical >= 8, High >= 6, Medium >= 4, Low >= 2, else Informational. ProvidedOnly caps at Low; suppressed states score 0.0 Informational.
Risk source: no-risk-record; registry: ; profile: standard; elapsed: Nones; cache: miss.
Scan: scan-minimal-001 | Target: rsa_small.py | 2026-09-10T10:00:00Z .. 2026-09-10T10:00:02Z
Detectors: ecdat 0.1.0.
Unknown risk inputs stay unknown: the engine records explicit mid-range assumptions per operation instead of exaggerating risk. Per-operation assumptions, full evidence, and machine-readable detail are in the JSON/CIR/CSV/SARIF/CBOM exports.
